

VDK 2000 Drilling System

VDK 2000 is a Flexible Robotic Environment 8 eight degrees of freedom drilling system. The system's main capability is to create various materials in order to build parts, repair existing parts or perform cladding operations.

Key Features of VDK 2000

- Drilling head of your choice
- Rotational and Linear Motion
- Custom Gimbal Axis
- Direct and inverse kinematics
- A2 Controller and 6-axis drive board
- Custom HMI
- ModusCAM – SolidWorks Cad-to-Motion
- Open architecture robotic system

With our help, you may design a robotic drilling system around your application today.
